

Dehydrator start-up kits and manifold kits include all air fittings and manifolds for interconnection of the BD series dehydrators with pressurisable antennas, transmission lines and feeder systems. Installation kits provide versatile mouting options. Maintenance kits are recommended to ensure the highest level of reliability and lowest lifecycle costs of the dehydrators.

FEATURES / BENEFITS

Start-up Kits provide a complete range of fittings and accessories for installation and connection to a single system, or to corresponding manifold kit to support multiple antennas and feeder systems.
