

- RADIAFLEX® functions as a distributed antenna to provide communications in tunnels, mines and large building complexes and is the solution for any application in confined areas.
- Slots in the copper outer conductor allow a controlled portion of the internal RF energy to be radiated into the surrounding environment. Conversely, a signal transmitted near the cable will couple into the slots and be carried along the cable length.
- RADIAFLEX® is used for both one-way and two-way communication systems and because of its broadband capability, a single radiating cable can handle multiple communication systems simultaneously.
- This RADIAFLEX® radiating cable utilize a low-loss cellular polyethylene foam dielectric and a smooth copper outer conductor which offers a superior electrical performance together with good bending properties.

RLK cable, A-series

FEATURES / BENEFITS

- Broadband from 30 MHz to 980 MHz
- For applications in tunnels and buildings
- Low coupling loss variations

|-------------------------------------|--------------|---|
| Jacket | | JFL |
| Jacket Description | | Halogen free, non corrosive, flame and fire retardant, low smoke, polyolefin + flame barrier tape above outer conductor for lowest cable loss |
| Slot Design | | Groups of vertical slots at short intervals |
| Inner Conductor Material | | Copper Tube |
| Outer Conductor Material | | Overlapping Copper Strip |
| Diameter Inner Conductor | mm (in) | 9.3 (0.37) |
| Diameter Outer Conductor | mm (in) | 23.8 (0.94) |
| Diameter over Jacket Nominal | mm (in) | 28.5 (1.12) |
| Minimum Bending Radius, Single Bend | mm (in) | 350 (13.8) |
| Cable Weight | kg/m (lb/ft) | 0.55 (0.37) |
| Tensile Force | N (lb) | 2300 (507) |
| Indication of Slot Alignment | | Bulge atop slots |
| Recommended / Maximum Clamp Spacing | m (ft) | 0.9 (3) |
| Minimum Distance to Wall | mm (in) | 80 (3.15) |

Notes

- Coupling loss as well as longitudinal attenuation of RADIAFLEX® cables are measured by the free space method according to IEC 61196-4.
- Coupling loss values are measured with a radial (below 330 MHz) or parallel (above 330 MHz) orientated dipole antenna.
- The coupling loss values given in brackets are average values of all three spatial orientations (radial, parallel and orthogonal) of dipole antenna.
- Coupling loss values are given with a tolerance of +10 dB and longitudinal loss values with a tolerance of +5%. Note: Measured values below nominal are better. They are not limited by any tolerance-range.
- In case of a conflict of operational and stop band, please contact RFS for further assistance.
- As with any radiating cable, the performance in building or tunnel environments may deviate from figures based on free space method.
