

- RADIAFLEX® functions as a distributed antenna to provide communications in tunnels, mines and large building complexes and is the solution for any application in confined areas.
- Slots in the copper outer conductor allow a controlled portion of the internal RF energy to be radiated into the surrounding environment. Conversely, a signal transmitted near the cable will couple into the slots and be carried along the cable length.
- RADIAFLEX® is used for both one-way and two-way communication systems and because of its broadband capability, a single radiating cable can handle multiple communication systems simultaneously.
- This RADIAFLEX® radiating cable utilize a low-loss cellular polyethylene foam dielectric and a smooth copper outer conductor which offers a superior electrical performance together with good bending properties.

FEATURES / BENEFITS

- Wideband from 30 MHz to 980 MHz
- For applications in tunnels and buildings
- Low coupling loss variations

RLK12-50JFNA

Technical features

| GENERAL SPECIFICATIONS | | | | | |
|----------------------------------------------------|--------------------|------------------|--|--|--|
| Size | | 1/2 | | | |
| ELECTRICAL SPECIFICATIONS | | | | | |
| Max. Operating Frequency | MHz | 980 | | | |
| Cable Type | | RLK | | | |
| Impedance | Ohm | 50 +/- 2 | | | |
| Velocity, percent | % | 87 | | | |
| Capacitance | pF/m (pF/ft) | 75 (22.9) | | | |
| Inductance, uH/m (uH/ft) | μH/m (μH/ft) | 0.188 (0.057) | | | |
| DC-resistance inner conductor, ohm/km (ohm/1000ft) | Ω/km (Ω/1000ft) | 1.97 (0.6) | | | |
| DC-resistance outer conductor, ohm/km (ohm/1000ft) | Ω/km (Ω/1000ft) | 4.84 (1.48) | | | |
| Stop bands | MHz | 300-375, 675-685 | | | |
| Frequency Selection | MHz | 600, 900 | | | |

Notes

- Coupling loss as well as longitudinal attenuation of RADIAFLEX® cables are measured by the free space method according to IEC 61196-4.
- Coupling loss values are measured with a radial (below 470 MHz) or parallel (above 470 MHz) orientated dipole antenna.
- The coupling loss values given in brackets are average values of all three spatial orientations (radial, parallel and orthogonal) of dipole antenna.
- Coupling loss values are given with a tolerance of +10 dB and longitudinal loss values with a tolerance of +5%. Note: Measured values below nominal are better. They are not limited by any tolerance-range.
- In case of a conflict of operational and stop band, please contact RFS for further assistance.
- As with any radiating cable, the performance in building or tunnel environments may deviate from figures based on free space method.
