

RFS Connector Installation Tools

OMNI FIT™ Premium & Standard Cable Preparation Tools

These special automated trimming tools make the OMNI FIT™ Premium (D01 Series) and OMNI FIT™ Standard (C02 and C03 Series) connector attachment easier. Due to their unique design, no further tools are required to prepare the cable for connector attachment. These compact tools provide all the necessary functions. (C02 and C03 Series require manual flaring using a standard knife).

Exclusive Features and Benefits

- **Precise preparation**
Exact and repeatable trimming dimensions
- **Intuitive functionality**
Easy, user-friendly connector installation
- **Jacket stripping tool included**
Cost-effective all-in-one tool set
- **Tool guide included**
Consistent cable prep length every time
- **Long-lasting cutting blades**
Low maintenance costs
- **Drill attachment**
Increased preparation speed

Universal Combination Preparation Tools for CELLFLEX Cables and Connectors

The Universal Trimming Tool Series prepares foam-dielectric coaxial cable for connector attachment. It can also be used to prepare 1/2" air-dielectric ICA12-50JPL cable for connector attachment.

The combination chamfer and flare station eliminates the need for individual tools for jacket trimming, deburring and proper flaring. Each tool contains two preset cutting blades designed to efficiently trim the outer conductor and dielectric material for proper connector installation. It also identifies the cable jacket cut back and flare tools where required.

The tool series offers the additional advantage to be convertible to different connector families and cable sizes (1/4" up to 7/8" & 1-1/4" up to 1-5/8") by changing the insert. Different inserts are available as optional orderable items.

Jacket Stripping Tools

These tools are used for quick and easy removal of the cable jacket for installation of connectors or grounding kits.

The heavy duty version with exchangeable blade is ideal for use on cable mounted close to structures and/or in multiple runs. Just clamp the JSTRIP tool around the cable and rotate.

The standard version requires the use of a screwdriver as a handle.

Inner Conductor Cleaner

This is an optional connector preparation tool for cables with a solid inner conductor. It helps to remove the residual dielectric from the inner conductor of cables during preparation for connector installation. It enables clean contact areas without any risk of surface degradation.
